Abstracts

According to our (Global Info Research) latest study, the global Current-Limiting Fuse (CLF) market size was valued at US\$ 3274 million in 2024 and is forecast to a readjusted size of USD 5313 million by 2031 with a CAGR of 7.1% during review period.

Current-Limiting Fuse (CLF) is a specially designed fuse. Its core function is to protect electrical equipment and lines from damage by quickly cutting off the circuit and limiting the peak value of the fault current when a short circuit or overload current occurs. When the current exceeds the rated value (usually 5-10 times the rated current), the fuse (such as silver wire or copper wire) inside the fuse quickly melts. The melting time is usually in milliseconds (such as 8-20ms), which is much faster than ordinary fuses (hundreds of milliseconds). During the melting process, the melt vaporizes to form an arc, and the arc resistance increases sharply, limiting the fault current to 3-5 times the rated current (ordinary fuses may reach more than 10 times the rated current).
