The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Current Sense Amplifier Ics are a kind of special amplifier that has been used as a shunt resistor in the power rail that provides a small voltage drop when current flows through the resistor. This voltage drop is converted and amplified by the current sense amplifier into the small output voltage. These amplifiers are designed for a special purpose, so that the amplifier could amplify a very small amount of sensed voltage across the shunt resistor, typically in 10 to 100 mV range.
