## Abstracts

According to our (Global Info Research) latest study, the global Current Sensing Chips market size was valued at USD 433.2 million in 2023 and is forecast to a readjusted size of USD 574.5 million by 2030 with a CAGR of 4.1% during review period.

Current sensing means that the system produces a voltage signal as per the current in the circuit. One common way to sense this current is to rely on a resistor and place it in the way of the current. Use a series arrangement for this so that you can keep the resistors almost anywhere in the current's path.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
