A Current/Voltage Transmitter Monitor is a device used to monitor and measure current or voltage signals. It is commonly used in industrial automation and control systems to convert current or voltage signals into standardized signals (such as 4-20mA or 0-10V) for easy transmission and processing. A current/voltage transmitter monitor typically consists of an input and an output. The input terminal is connected to the source of the current or voltage signal, which can receive the current or voltage signal from the sensor, instrument, equipment or system. The output typically produces a standardized current or voltage signal for easy connection to control systems, data acquisition systems, recorders, or other equipment. Current/Voltage Transmitter Monitors are typically high accuracy and stable and can be used in a wide range of industrial environments. They usually have various functions, such as signal amplification, filtering, linearization, isolation, overload protection, etc., to ensure reliable signal conversion and transmission.
