Abstracts

According to our (Global Info Research) latest study, the global Curtain Wall market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Curtain Wall is an outer covering of a building in which the outer walls are non-structural, utilized to keep the weather out and the occupants in. Since the curtain wall is non-structural, it can be made of lightweight materials, thereby reducing construction costs. When glass is used as the curtain wall, an advantage is that natural light can penetrate deeper within the building. The curtain wall facade does not carry any dead load weight from the building other than its own dead load weight. The wall transfers lateral wind loads that are incident upon it to the main building structure through connections at floors or columns of the building. A curtain wall is designed to resist air and water infiltration, absorb sway induced by wind and seismic forces acting on the building, withstand wind loads, and support its own dead load weight forces.

In Asia, the key players of curtain wall include Yuanda, Jangho, Guangtian Group, YKK AP, AVIC Sanxin, etc. The top five players hold a share over 18%. In terms of product type, Unitized is the largest segment, occupied for a share of 36%, and in terms of application, Commercial has a share about 85 percent.
