Abstracts

According to our (Global Info Research) latest study, the global Curved Screen Display market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A curved screen monitor uses a 90-degree vertical line in the middle of the screen as its axis, and the left and right screens are brought together toward the middle, thus presenting a curved screen effect. It is a display screen made of flexible plastic, mainly realized through OLED panels. Compared with direct-facing screens, curved screens have better elasticity and are less likely to break. Curvature is a measure of curved monitors and refers to the degree of curvature of the screen, measured in R.

As flexible OLED technology continues to mature, curved screens are no longer just a single look and feel optimization, but can also achieve various forms such as folding and curling, becoming an important part of the design of various electronic products. This variety of curved screen products will provide users with more personalized and experiential digital product solutions.
