Custom antibody conjugation service refers to a custom laboratory service that allows customers to design their own antibodies by modifying them using various tags or ligands. This service enables customers to create antibodies that specifically bind to their desired targets and enhance their functional capabilities. Customers can choose from a range of available tags or ligands, such as fluorophores, nanoparticles, toxins, drugs, etc., to suit their specific needs. The service typically involves specialized laboratory procedures and expertise to ensure that the antibodies are modified correctly and have the desired functional properties.

The industry trend for custom antibody conjugation service is towards increased demand in pharmaceutical, biotechnology, and academic research settings. With the growing demand for advanced antibody-based research tools and therapeutics, such services are becoming increasingly important. Additionally, the trend towards more personalized and precision medicine is driving the need for more customized antibodies that can target individual patients' unique characteristics and respond to their specific diseases. Furthermore, the increasing use of antibody-based drugs in oncology and other diseases is also contributing to the growth of this service. Custom antibody conjugation services also offer an opportunity for biotechnology companies and pharmaceutical companies to develop innovative therapeutic strategies that are tailored to individual patients' needs, thus contributing to the growth of this industry trend.
