The global Custom Polyclonal Antibody Development and Production Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Custom polyclonal antibody development and production service refers to a specialized service offered by biotechnology companies or research institutes for the generation of polyclonal antibodies tailored to meet specific research or diagnostic needs. This service involves the entire process of antibody development, starting from the immunization of host animals with the target antigen to the isolation and purification of the resulting polyclonal antibodies. The service providers work closely with the clients to understand their requirements, including the target antigen, desired application, and specific antibody characteristics. They then design a customized immunization protocol and select the most suitable host animal species for antibody production. The antigen is prepared and injected into the host animals, which triggers an immune response. The serum containing polyclonal antibodies is collected, and the antibodies are purified using various methods such as affinity chromatography or protein A/G purification.

The final purified polyclonal antibodies are tested for their specificity, affinity, and functionality before being supplied to the clients. This service offers researchers a convenient and reliable solution for obtaining high-quality polyclonal antibodies tailored to their specific research needs.
