According to our (Global Info Research) latest study, the global Custom Power market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Custom power is a strategy, which is intended principally to convene the requirement of industrial and commercial consumers. The concept of the custom power is tools of application of power electronics controller devices into power distribution system to supply aquality of power, demanded by the sensitive users.

Due to its high power generation efficiency, low environmental pollution, and easy construction, fuel cells have become the fourth-generation power generation technology after hydropower, thermal power, and nuclear power. It has broad prospects for future development. Many countries have successively issued relevant policies to guide and facilitate related development. . Japan's Ministry of Economy, Trade and Industry (METI), the U.S. Department of Energy (DOE), and the European Commission's Energy Directorate (ENER) reached a hydrogen energy and fuel cell technology cooperation at the G20 Energy and Environment Ministerial Meeting in 2019 The intent of the alliance, which means that countries promote the development of fuel cells from multiple perspectives, and continue to strengthen the construction and cooperation of hydrogen energy and fuel cells in the world. The demand for renewable energy continues to expand. According to data from the company's 'Fuel Cell Research', by the end of 2022, global renewable energy power generation capacity has reached 3,300 GW, and the stock has increased by a record 295 GW. Data from the China Energy Administration shows that in 2022, China's renewable energy power generation will reach 2.7 trillion kilowatt-hours, accounting for 31.6% of the entire society's electricity consumption, an increase of 1.7 percentage points from 2021, which is equivalent to reducing domestic

carbon dioxide emissions by approximately 2.26 billion. Ton.
