Abstracts

According to our (Global Info Research) latest study, the global Cutaneous Mastocytosis market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Mastocytosis is rare condition characterized by excessive accumulation of mast cells in the body tissues. Mast cells release large amounts of histamine in blood which leads to itchy skin, skin rash and hot flushes. These cells are found in skin and the lining of stomach and lungs. Mast cells accumulated in the skin is referred to as cutaneous mastocytosis. Usually affecting children, the most common symptoms of cutaneous mastocytosis is abnormal growth on the skin such as spots or blisters which can form a rash on the body. The World Health Organization (WHO) has classified cutaneous mastocytosis into three variants namely urticaria pigmentosa, diffuse cutaneous mastocytosis and solitary cutaneous mastocytosis. Besides these, there are two other forms of cutaneous mastocytosis namely nodular mastocytosis and telangiectasia macularis eruptive perstans (TMEP) which are currently under review as they are very rare form of condition.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer

consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
