Cutting coolant purification is a kind of equipment specially used to remove impurities such as suspended particles, oil and microorganisms in cutting fluid. It improves the cleanliness of cutting fluid through physical filtration or centrifugation to ensure the efficiency and safety of cutting process. Its characteristics are high filtration efficiency, which can quickly remove pollutants in cutting fluid; compact structure, small footprint, easy installation and movement; easy operation and low maintenance cost. The advantage is that it increases the service life of cutting fluid, reduces the frequency of cutting fluid replacement and waste fluid treatment costs, improves the working environment, reduces environmental pollution, and improves production efficiency and processing quality.
