## Abstracts

The global CVD Coated Turning Insert market size is expected to reach \$ 4787.9 million by 2029, rising at a market growth of 4.8% CAGR during the forecast period (2023-2029).

The turning inserts are such cutting tools that are used to machine different metals like steel, carbon, cast iron, and high-temperature alloys. They are indexable which means they can be rotated, flipped, exchanged with other insert without the need to disturb tool geometry. A CVD coating is a material applied to a surface by a method called chemical vapor deposition. Remains bonded in high stress environments and when the surface flexes due to high adhesion characteristics. Precursor gas can be optimized for wear resistance, high lubricity, corrosion resistance, fouling resistance, high purity, or chemical inertness.

This report studies the global CVD Coated Turning Insert production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for CVD Coated Turning Insert, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
