According to our (Global Info Research) latest study, the global CVD Susceptor market size was valued at US\$ 384 million in 2025 and is forecast to a readjusted size of US\$ 672 million by 2032 with a CAGR of 8.4% during review period.

CVD is a chemical reaction growth technology used to produce high-purity, high-performance solid-state materials. CVD-SiC/CVD-TaC uses graphite as the base material of components. A layer of SiC/TaC film is evenly covered on the graphite surface by the CVD method, thereby improving the corrosion resistance and high temperature resistance of the components. CVD Susceptor is a graphite substrate used in the CVD process. During the CVD process, the susceptor is used to support and heat the reactants, promote the chemical reaction, and deposit the required materials on the substrate surface. CVD Susceptor is usually made of high temperature stable graphite material, which has good thermal conductivity and high temperature resistance. This report mainly counts TaC coated susceptor and SiC coated susceptor.

Global key players of CVD Susceptor include Schunk Xycarb Technology, SGL Carbon, Momentive Technologies, TOYO TANSO, CoorsTek, etc. The top five players hold a share about 80%. Asia-Pacific is the world's largest market for CVD Susceptor and holds a share about 77%, followed by North America and Europe, with share about 11% and 10%, separately. In terms of product type, SiC-coated Susceptor is the largest segment, accounting for a share about 78%. In terms of application, MOCVD is the largest field with a share about 66 percent.
