Abstracts

The global CW UV Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CW UV Laser is a continuous wave laser with an output wavelength in the ultraviolet region (about 200-400 nm). It is produced by exciting atoms or molecules in a laser medium to spontaneously emit emitted photons using electromagnetic waves, chemical reactions, or other methods. Compared with other types of lasers, ultraviolet lasers have shorter wavelengths and higher light energy, and can be widely used in biomedicine, lithography, optical detection, material processing, optical communication and other fields.

This report studies the global CW UV Laser production, demand, key manufacturers, and key regions.
