Abstracts

CWDM is a technology that uses lasers of different wavelengths to carry different signals and multiplexes multiple optical signals on a single optical fiber. CWDM MUX/DEMUX applies this principle. CWDM MUX/DEMUX maximizes the capacity and increases bandwidth of a single or dual fiber optic cable. It mixes signals of different wavelengths onto a single fiber and splits them into the original signals again at the end of the link. This device is used to reduce the number of fiber optic cables required and obtain additional independent data links.
