According to our (Global Info Research) latest study, the global Cyanoacrylate Tissue Adhesive market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cyanoacrylate tissue adhesive is a medical glue commonly used in medical and surgical procedures to bond cuts or wounds to skin and tissue. It is a biodegradable adhesive mainly composed of cyanoacrylate monomers. This adhesive is usually supplied in liquid form and can be applied directly to the wound surface. When exposed to interstitial fluid or moisture, cyanoacrylate monomers bind to surrounding proteins and polymerize, forming a soft yet strong adhesive layer. It cures quickly and has a good bond, keeping cut edges tightly bonded together. Cyanoacrylate tissue adhesives can replace traditional sutures in some situations, such as small incisions, superficial trauma, closure of tissue layers during surgery, etc. It has advantages such as less surgical time, no stitches to remove, less scarring, and can provide some degree of water resistance.
