According to our (Global Info Research) latest study, the global Cyanuric Fluoride market size was valued at US\$ 113 million in 2025 and is forecast to a readjusted size of US\$ 142 million by 2032 with a CAGR of 3.4% during review period.

Cyanurol fluoride is an organic fluorinated compound and a derivative of fluorocyano compounds. It has a fluorine atom replacing the hydrogen atom in traditional cyano compounds, and has strong electronegativity and reactivity. Cyanurol fluoride is usually a colorless liquid with a pungent odor and is highly reactive to water, air and most organic solvents at room temperature. It is often used in organic synthesis as a fluorination reagent or intermediate, especially in the pharmaceutical, pesticide, fine chemical and other industries. Due to its high chemical activity, special care must be taken during the synthesis of cyanurol fluoride to avoid reacting with water or moisture in the air to produce harmful substances.
