Abstracts

According to our (Global Info Research) latest study, the global Cyber Intelligence Platform market size was valued at US$ 11883 million in 2025 and is forecast to a readjusted size of US$ 30493 million by 2032 with a CAGR of 14.4% during review period.

A Cyber Intelligence Platform is a unified, integrated security software system that collects, standardizes, enriches, correlates, analyzes and disseminates multi-source cyber threat intelligence (CTI) for security operation centers (SOC), enterprise security teams, MSSPs, government cybersecurity agencies and critical infrastructure operators.

It aggregates structured and unstructured threat data from open-source intelligence (OSINT), dark web monitoring, internal attack logs, third-party intelligence feeds, malware samples, vulnerability databases, adversary tracking data and network traffic logs. Through standardized STIX/TAXII protocols, machine learning correlation and adversary profiling, the platform outputs actionable intelligence: IoCs (IP, domain, hash), TTPs, adversary groups, vulnerability risk ratings, dark web data leakage alerts and attack prediction.

Core value: Enable proactive threat defense instead of passive response, accelerate incident triage, block known malicious indicators in advance, identify high-risk zero-day/vulnerability threats, and support adversary attribution and security strategic decision-making.
