Abstracts

The global Cyber Security Online Training market size is expected to reach \$ 1740 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

To address the problems of high costs, inflexible scheduling, outdated skills, and difficulties in large-scale employee coverage in traditional cybersecurity training, online cybersecurity training has emerged. Since the widespread adoption of the internet and the surge in cybersecurity demand in the early 21st century, this service, relying on online education technology and practical cybersecurity needs, has gradually developed into a core pathway for cybersecurity talent cultivation. Currently, online cybersecurity training is widely used in enterprise security team capacity building, government agency cybersecurity training, educational institution cybersecurity courses, and individual skills enhancement.

Online cybersecurity training is a 'talent engine' for the construction of Digital China. Its development is driven by both policy dividends and market demand, but it also faces severe challenges from technological iteration and talent shortages. Through intelligent technology empowerment, practical curriculum design, and ecological industry collaboration, the industry is transforming from 'scale expansion' to 'quality improvement.' In the future, with breakthroughs in technologies such as AI and quantum security, and the deepening integration of industry and education, online cybersecurity training will build a 'trustworthy and controllable' security barrier for the development of the digital economy, becoming an important support for the modernization of the national security system.
