Cybersecurity operations services refer to services that involve a professional security team continuously monitoring, managing, and responding to cybersecurity threats in an organization's IT environment. These services typically include Security Operations Center (SOC) monitoring, threat detection and analysis, incident response, vulnerability management, Security Information and Incident Management (SIEM) operations, and compliance monitoring. By outsourcing or partnering with professional security service providers, enterprises can achieve 24/7 security monitoring, thereby improving their ability to detect and respond to cyberattacks and security incidents. Cybersecurity operations services are widely used in industries such as finance, government, healthcare, telecommunications, energy, and large enterprises, which have high demands for the security protection of digital assets and critical infrastructure. The upstream of the cybersecurity operations service industry chain includes threat intelligence platforms, endpoint security software, network monitoring systems, cloud security tools, and data analytics technology providers; the midstream consists of cybersecurity service companies providing managed security services, SOC operations, incident response, and security consulting; and downstream users mainly include government agencies, financial institutions, telecommunications operators, medical institutions, manufacturing enterprises, and various organizations that require continuous protection of digital infrastructure and sensitive data. The gross profit margin for industry service providers is typically between 35% and 50%.
