According to our (Global Info Research) latest study, the global Cyclic Azo Amidine Initiator market size was valued at US\$ 105 million in 2025 and is forecast to a readjusted size of US\$ 131 million by 2032 with a CAGR of 3.3% during review period.

Cyclic azoamidine initiators are a class of organic compounds containing both azo groups and cyclic amidine structures. They readily decompose to produce free radicals under heat or light, and are widely used in polymerization reactions, particularly in the synthesis of water-soluble polymers such as PVC and polyacrylonitrile.

The upstream raw materials mainly include hydrazine compounds, cyanides, and acetone or its derivatives. Through a series of organic synthesis reactions (such as azo coupling, substitution, and hydrolysis), an intermediate with a cyclic structural unit is obtained, which then reacts with a cyano or amidine group to produce the final product.

The global sales volume in 2025 is estimated to be approximately 2000 tons, with an average market price of approximately US\$50,800 per ton. The industry's gross profit margin is in the range of 15%–30%.
