Abstracts

The global Cyclic Olefin Polymer (COC/COP) market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Cyclic olefin polymer (COC/COP) is formed by the polymerization of cyclic olefin monomers. As a thermoplastic optical grade material with excellent performance, it is widely used in the fields of optics, medical and packaging. In the field of optics, COC/COP are widely used to make various types of lenses, mobile phone display films, etc. With the trend of multi-lens smartphones and the gradual expansion of demand for optical lenses in automobile autonomous driving technology, COC is widely used in the field of optical lenses. Broad prospects. In the medical field, COC/COP has good transparency and water vapor barrier properties, as well as excellent biocompatibility, and its density is much smaller than glass. It is especially suitable for use in blood storage containers, test tubes, Petri dishes, Syringes and pipettes, etc. COC/COP has high technical barriers from monomers, catalysts to polymerization technologies. Currently, its production technology is mainly controlled by Japanese companies such as Zeon, JSR, Polytechnic, and Mitsui Chemicals.
