According to our (Global Info Research) latest study, the global Cycling App for Bike Routes market size was valued at US\$ 700 million in 2025 and is forecast to a readjusted size of US\$ 1169 million by 2032 with a CAGR of 7.5% during review period.

Cycling App for Bike Routes refers to a mobile or web-based software platform designed to help cyclists plan, discover, navigate, record, and share bicycle routes. These apps typically integrate GPS positioning, digital maps, elevation profiles, road-surface information, route optimization, turn-by-turn navigation, offline maps, ride tracking, GPX/FIT/TCX file import and export, and social or community-based route recommendations. They are used by road cyclists, mountain bikers, gravel riders, commuters, touring cyclists, and e-bike users to improve route safety, riding efficiency, training quality, and travel experience.

Demand for cycling route apps is being driven by the growth of recreational cycling, urban bike commuting, e-bike adoption, gravel and mountain biking, cycling tourism, and consumers' increasing reliance on mobile navigation. Users need safer bike-friendly routes, elevation-aware planning, offline navigation, real-time tracking, route sharing, and integration with wearables or bike computers. Business opportunities mainly come from premium subscriptions, advanced map layers, offline route packages, route-planning tools for tourism agencies and event organizers, partnerships with bike brands and hardware companies, advertising, and data services for mobility planning. As cycling becomes more connected and personalized, providers with strong routing algorithms, high-quality map data, active user communities, and device ecosystem integration will have better growth potential.
