According to our (Global Info Research) latest study, the global Cyclohexanol market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cyclohexanol is the organic compound with the formula HOCH(CH₂)₅. The molecule is related to cyclohexane ring by replacement of one hydrogen atom by a hydroxyl group. This compound exists as a deliquescent colorless solid with a camphor-like odor, which, when very pure, melts near room temperature. Billions of kilograms are produced annually, mainly as a precursor to nylon.

Cyclohexanol is a versatile high-boiling solvent (used as a solvent for paints, varnishes, and coatings to improve fluidity, improve smoothness, and prevent film spray); water-soluble latex stabilizer; synthetic raw materials (production) Adipic acid and caprolactam, monomeric monomers for polymerization, plasticizers, resin stabilizers such as PVC); raw materials for insecticides and herbicides; petroleum processing aids; rubber additives; pharmaceuticals, cosmetics (disinfecting soaps, dry cleaning agents), dye raw materials; also used as leather degreaser, fur detergent, metal detergent and polish; textile auxiliaries (fiber finishing agents), etc.

Ethanolamine is an important organic compound with wide applications in many fields, such as agriculture, pharmaceuticals, cosmetics, personal care, coatings, etc. As the market demand in these areas increases, the demand for ethanolamine is also likely to increase. In addition, the application of ethanolamine in the field of green pesticides is also worthy of attention. As people's demand for ecological agriculture increases, the demand for monoethanolamine in green pesticides may increase.
