Abstracts

The global Cyclohexanol market size is expected to reach \$ 1274 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

Cyclohexanol is a secondary alicyclic alcohol with the chemical formula $C_6H_{12}O$, primarily produced through cyclohexane oxidation or phenol hydrogenation, and widely used as a key intermediate in the manufacture of adipic acid and caprolactam for nylon production, as well as in solvents, plasticizers, coatings, and fine chemical synthesis.

The cyclohexanol industry chain starts upstream with petrochemical feedstocks such as benzene and cyclohexane along with hydrogen, catalysts, and energy supplied by refining and chemical enterprises, continues midstream with cyclohexanol manufacturers utilizing oxidation or hydrogenation processes and often operating integrated facilities producing KA oil and related intermediates, and extends downstream to industries converting cyclohexanol into adipic acid and caprolactam for nylon production, as well as applications in solvents, coatings, plasticizers, and pharmaceuticals, ultimately serving end markets including automotive, textiles, construction materials, consumer goods, and industrial manufacturing sectors requiring durable and high-performance polymer materials.

Globally, numerous cyclohexanol projects are under construction and planned, particularly in Asia where large-scale integrated petrochemical complexes in China and India are expanding capacity linked to nylon intermediates, while Europe and North America focus on modernization, efficiency upgrades, and emission reduction in existing plants, and the Middle East is investing in downstream diversification leveraging feedstock advantages, alongside emerging initiatives exploring bio-based cyclohexanol and low-carbon production technologies, with these projects typically integrated with

adipic acid and caprolactam units to strengthen value chain control, meet growing engineering plastics demand, and enhance global supply competitiveness.

2025 Global Market sales Volume: 0.7 Million Tons. Average Global Market Price: USD 1,400/Ton. Market Average Gross Profit Margin: 17%.

Ethanolamine is an important organic compound with wide applications in many fields, such as agriculture, pharmaceuticals, cosmetics, personal care, coatings, etc. As the market demand in these areas increases, the demand for ethanolamine is also likely to increase. In addition, the application of ethanolamine in the field of green pesticides is also worthy of attention.
