Abstracts

The global Cycloidal Gear Speed Reducer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cycloidal gear speed reducer is a mechanism used to reduce the speed of an input shaft by a certain ratio. Cycloidal reducers are capable of relatively high ratios in a compact size with very little backlash. The input shaft drives an eccentric bearing, which in turn drives the cycloid disc in an eccentric cycloidal motion. The periphery of the disk meshes with a stationary ring gear and has a series of output shaft pins or rollers placed across the surface of the disk. These output shaft pins directly drive the output shaft as the cycloidal disc rotates.

This report studies the global Cycloidal Gear Speed Reducer production, demand, key manufacturers, and key regions.
