Abstracts

The global Cyclomethicone market size is expected to reach \$ 1377 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

Cyclomethicone, also known as decamethylcyclopentasiloxane, is a clear, odorless, alcohol free and colorless silicone liquid. It is soluble with numerous oil based products. Cyclomethicone, commonly known as cyclopolydimethylsiloxane (CAS number 69430-24-6), is a colorless, odorless, transparent, volatile organosilicon liquid. It possesses excellent spreading, volatility, and lubricating properties, and is widely used in cosmetics and pharmaceuticals as an emollient, solvent, and carrier, providing a silky feel and improving product texture.

Upstream products include metallic silicon, chloromethane, and crude silicon powder synthesized from these materials. In 2024, global sales were approximately 714,000 tons, with an average market price of approximately US\$1450/ton. The industry's gross profit margin is in the range of 20%-35%.

Cyclomethicones, due to their excellent volatility and low surface tension, still maintain a core demand in the high-performance cosmetics and fine chemical industries. The market focus is shifting from low-end, high-volume production to high-purity, specialized products. Current regulations are driving the industry to accelerate the transition to low-viscosity linear silicone oils or bio-based alkane alternatives. Purification processes that can achieve extremely low residue levels have become crucial for companies to establish a competitive advantage. Cyclomethicone
