According to our (Global Info Research) latest study, the global Cyclone Preheater market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A cyclone preheater, also known as a suspension preheater, is a component of a cement manufacturing process that helps to preheat and calcine raw materials before they enter the rotary kiln for clinker production. In the cement production process, raw materials such as limestone, clay, shale, and iron ore are crushed and ground into a fine powder. This powder, known as raw meal, is then fed into the cyclone preheater system. The cyclone preheater consists of several stages of cyclones, which are cylindrical devices with cone-shaped bottoms. Each cyclone is connected in series, with the gas and raw meal flowing through them in a specific order.
