Abstracts

The global Cyclopropanecarboxylic Acid market size is expected to reach \$ 450 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global Cyclopropanecarboxylic Acid output reached about 70,000 tons and global capacity of around 80,000 tons. The average price is about USD 4,300 per ton, with gross margins near 30%. Cyclopropanecarboxylic Acid is a strained alicyclic carboxylic acid (molecular formula: $C_3H_4O_2$) that serves as an important intermediate in the synthesis of pharmaceuticals, agrochemicals, pyrethroid insecticides, and specialty organic compounds. Owing to the unique chemical properties imparted by its cyclopropane ring, it is widely used to introduce rigid structural motifs that enhance the biological activity, metabolic stability, and selectivity of active ingredients. Industrial production typically starts with petrochemical-derived feedstocks such as propylene, ethylene, or halogenated hydrocarbons, together with reagents including malonic acid derivatives, diazo compounds, cyanides, and oxidation or hydrolysis chemicals, followed by cyclopropanation, carboxylation, hydrolysis, purification, and crystallization processes to obtain high-purity Cyclopropanecarboxylic Acid. The midstream industry consists of manufacturers producing technical-grade and high-purity material for fine chemical applications, while downstream demand comes primarily from pharmaceutical intermediates, crop protection chemicals, pyrethroid insecticide synthesis, custom chemical manufacturing, research laboratories, and specialty chemical producers, making Cyclopropanecarboxylic Acid an important building block in the global fine chemicals value chain.

The Cyclopropanecarboxylic Acid market is experiencing steady growth due to rising demand for high-value pharmaceutical intermediates, increasing production of

pyrethroid insecticides for crop protection and public health applications, and expanding use of cyclopropane-containing compounds in modern drug discovery. Growth is further supported by continuous investment in agrochemical innovation, increasing demand for specialty and custom synthesis services, and the development of new active pharmaceutical ingredients (APIs) incorporating cyclopropane structures to improve efficacy and metabolic stability. Advances in catalytic cyclopropanation technologies, process optimization, and green chemistry are improving manufacturing efficiency, product purity, and production yields while reducing costs and environmental impact. In addition, expanding pharmaceutical and fine chemical manufacturing in Asia-Pacific, particularly in China and India, rising global agricultural productivity requirements, and increasing outsourcing of custom chemical manufacturing are creating new opportunities for Cyclopropanecarboxylic Acid producers across the pharmaceutical, agrochemical, and specialty chemicals industries.

This report studies the global Cyclopropanecarboxylic Acid production, demand, key manufacturers, and key regions.
