According to our (Global Info Research) latest study, the global Cylinder Timing Control Integrated Hot Runner System market size was valued at US\$ 402 million in 2025 and is forecast to a readjusted size of US\$ 554 million by 2032 with a CAGR of 4.7% during review period.

The cylinder-driven sequential hot runner system is an injection molding system based on the needle valve hot runner system. It uses cylinders to drive valve needles to open or close gates in a set sequence, allowing the melt to flow sequentially and evenly into the mold, improving the consistency of gate marks, weld lines, and the finished part.

Upstream components mainly include mold steel, manifold/nozzle materials, heaters, thermocouples, seals, cylinders, solenoid valves, timing controllers, and temperature control elements. Downstream applications are primarily in precision injection molding products such as automotive, medical, packaging, home appliances, electronic connectors, and everyday item covers.

The global unit price of a cylinder-driven sequential hot runner system is \$6,200, with annual sales of approximately 63,000 units, global production capacity of 70,000 units, and an industry profit margin of 13.5%.
