According to our (Global Info Research) latest study, the global Cylindrical Battery Stacking Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The cylindrical battery stacking machine automatically realizes the stacking process of the battery core, stacks the positive electrode sheet, diaphragm, and negative electrode sheet in order to form a small battery cell, and then stacks and connects the small battery cells in parallel to form a large battery cell. During the stacking process, the diaphragm is actively unwound, and the stacking table drives the diaphragm to move back and forth to form a Z-shaped stack. After the stacking is completed, it is cut according to the set length and automatically sent out for manual glue application.
