Abstracts

According to our latest research, the global Cylindrical Full-tab Battery Cell Manufacturing Equipment market size will reach USD 3121 million in 2031, growing at a CAGR of 61.5% over the analysis period.

Cylindrical full-tab battery cell manufacturing equipment refers to a series of mechanical equipment and process systems specifically used to produce cylindrical full-tab battery cells. The full-tab process is different from the traditional single/double-tab process. It turns the entire positive/negative current collector into a tab, and connects the current collector to the battery housing or current collector plate over the entire area, thereby greatly reducing the internal resistance and heat generation of the battery, solving the heating problem of high-energy-density batteries, meeting the fast-charging power performance requirements, and ensuring high safety. The manufacturing equipment covers a full set of process flows including tab molding, encapsulation, shell insertion, current collector plate welding, lid closing, sealing, helium inspection, etc.

The emergence of full-tab process technology has significantly improved battery performance by reducing battery internal resistance, increasing charging and discharging power, and reducing heat generation.

Technological advances in manufacturing equipment, such as Yifei Laser's planetary flattening system and micron-level metal foil non-destructive shaping technology, have improved the production efficiency and qualified rate of full-tab batteries.

With the rapid development of new energy vehicles, energy storage systems, power tools and other fields, the demand for high-performance and high-energy density

batteries continues to grow.

Due to its excellent performance, full-tab batteries have broad application prospects in these fields, thus promoting the development of the battery cell manufacturing equipment market.

The support policies of various governments for new energy vehicles and clean energy industries have provided a good development environment for the cylindrical full-tab battery cell manufacturing equipment market.

Government incentives for R&D innovation, such as tax exemptions and financial subsidies, have also promoted technological innovation and equipment upgrades of related companies.
