Abstracts

The global Cylindrical Network Camera market size is expected to reach \$ 6739 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

A cylindrical network camera is a network video surveillance device that adopts a cylindrical appearance structure. It usually integrates image sensors, lenses, ISP encoding, and network transmission modules, supports Ethernet or PoE power supply, and realizes real-time video transmission, recording storage, and remote management through the network. It is widely used in scenarios such as parks, factories, warehouses, transportation, municipal, commercial chains, and residential perimeters. In 2025, the global sales volume will be about 115 million units, with an average unit price of about \$38 per unit and a capacity utilization rate of about 77%. The upstream mainly includes CMOS image sensors, lens modules, main control SoC and memory, PoE and power supply devices, structural components and protective components, as well as firmware and video codec software suppliers and foundries; The downstream includes security engineering companies, system integrators, channel distributors, property and park operators, retail chains and industrial enterprises, IT operation and maintenance service providers, and government and enterprise units. The industry's gross profit margin is about 27%. In the product cost structure, image sensors and ISPs account for about 24%, main control SoC and storage account for about 18%, lenses and filters account for about 12%, structural components and protective components account for about 14%, PoE power supplies and interface components account for about 9%, assembly, testing and yield losses account for about 10%, software and cloud platform service amortization accounts for about 5%, and logistics, channel and management expenses account for about 8%. The demand list mainly includes perimeter defense, entrance and exit and roadway monitoring, anti-theft and damage

prevention in storage areas, production site and workstation management, store damage prevention and passenger flow analysis, parking lot and road auxiliary evidence collection, etc; The downstream customer list includes large park and factory owners, logistics and warehousing operators, chain retail enterprises, property management companies, municipal and transportation management units, as well as top security system integrators. The business opportunities come from the promotion of digital governance policies in cities and parks, the construction of vehicle road coordination and intelligent transportation, the upgrading of video structuring and edge AI capabilities, as well as changes in consumer demands for higher clarity, lower false alarms, easier installation and maintenance, and lower total cost of ownership.

Cylindrical network camera is upgrading from simply seeing to understanding, with higher resolution and the popularization of full color low light imaging driving replacement demand, while edge ai and video structuring shift devices from passive evidence collection to proactive early warning and operational analytics, future competition will focus on low light imaging performance and optical lens capability, on device computing power and algorithm adaptation, remote operations and maintenance and platform ecosystem compatibility, and supply chain cost control, and vendors with broad channel coverage and strong industry solution delivery are more likely to secure more stable and sustained orders in project based markets such as campuses, industry, and transportation.
