According to our (Global Info Research) latest study, the global Cylindrical Roller Thrust Bearings market size was valued at USD 603 million in 2023 and is forecast to a readjusted size of USD 902.7 million by 2030 with a CAGR of 5.9% during review period.

A cylindrical roller thrust bearing is a particular type of roller bearing. Like other roller bearings, they permit rotation between parts, but they are designed to support a high axial load while doing this (parallel to the shaft). Higher speed applications require oil lubrication. Generally, they are composed of two washers (raceways) and the cylindrical roller elements which are typically caged. As opposed to roller thrust bearings, ball thrust bearings can generally operate at higher speeds but at lower loads.
