Abstracts

According to our (Global Info Research) latest study, the global Cylindrical Rollers market size was valued at US\$ 516 million in 2025 and is forecast to a readjusted size of US\$ 745 million by 2032 with a CAGR of 5.4% during review period.

Cylindrical rollers are key rolling elements in cylindrical roller bearings, typically manufactured from high-carbon chromium bearing steels such as GCr15, 100Cr6, and SAE52100 through cold forming, heat treatment, and precision grinding processes. They primarily carry radial loads and are characterized by high stiffness, low friction, and suitability for high-speed operation, making them fundamental components in modern industrial bearing systems. Precision grades generally follow the ISO 492 standard (P0?P2?P4?P5?P6), where P2/P4 are used in high-precision applications such as machine tool spindles, and P5/P6 are used in industrial and general-purpose equipment. In 2025, the global production of cyclone rollers is estimated at 140,000 tons, with a unit price of approximately US\$3,583.33 per ton and a gross profit margin of approximately 14.06%.

Cylindrical rollers represent a typical industrial foundational component market closely linked to global manufacturing and advanced equipment industries. Downstream applications are primarily concentrated in machine tools, industrial gearboxes, electric motors, wind power transmission systems, and general industrial bearings.

Structurally, the global cylindrical roller market is dominated by industrial-grade products (P6 and below), accounting for approximately 70%?80% of total volume, characterized by large-scale production and price sensitivity. Mid-to-high precision products (P5 and above) account for around 20%?30%, mainly used in machine tool spindles, high-speed

wind energy systems, and advanced industrial transmission systems, with higher technical barriers and stronger pricing power.

Driven by industrial automation upgrades, machine tool advancement, and wind turbine upscaling, demand for P4/P5 high-precision products is steadily increasing. Chinese manufacturers hold strong advantages in the mid-end P6 segment, while high-end P2/P4 segments still rely significantly on import substitution potential.
