According to our (Global Info Research) latest study, the global Cysteamine Hydrochloride Solution market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Cysteamine hydrochloride is easily soluble in water and ethanol. The color of the aqueous solution darkens when it comes into contact with the metal, and sometimes precipitation occurs. Has deliquescence. Unstable to light. It can undergo condensation reactions with many organic compounds and is a chromium agent for many metal ions.

The main use of cysteamine hydrochloride is as a pharmaceutical intermediate for the manufacture of various anti ulcer drugs such as potassium cyanide and ranitidine. Removing cysteine from cells for the treatment of nephrotic cystatin disease; Cysteine can be used for detoxification. Can relieve symptoms of poisoning such as thallium and tetraethyl lead (especially neurological disorders); Can be used to prevent and treat radiation syndrome caused by X-rays or other radiation sources. Cysteamine, an important pesticide intermediate, is commonly used in industrial production of pharmaceuticals, pesticides, cosmetics, etc. due to its active thiol and amino groups. Feed additives CS and CSH are ideal substances for reducing the level of somatostatin in the body, promoting digestion and metabolism, and promoting animal growth. It can be used as a growth promoter in livestock and poultry production. CS is used for feed, and its advantages include no species specificity, suitability for production applications, wide applicability, and low cost. CS and its hydrochloride salt CSH in the cosmetics field are intermediate raw materials for some cosmetics and also a reducing agent for cold curly hair. They break the sulfur bond in the hair, reducing the tryptophan to a semi tryptophan containing a thiol group. The hair becomes soft, bends and deforms with the
