## Abstracts

According to our (Global Info Research) latest study, the global Cystic Fibrosis (Mucoviscidosis) Testing market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cystic Fibrosis, also known as mucoviscidosis, is an inherited genetic disorder that affects the secretory glands, including mucus and sweat glands. It mainly affects the lungs and digestive system. An individual suffering from cystic fibrosis show characteristic symptoms, such as, secretion of thick and sticky mucus. The disease develops over a period of time in the lungs and blocks the tubes that carry air in and out. Increased secretion of thick mucus accelerates the growth of bacteria and hence, gives rise to serious lung infections. Some of the major symptoms of cystic fibrosis include persistent cough, constant lung infection, salty tasting skin, problem in breathing, bulky stools, difficulty in bowel movements, poor growth and poor weight gain. Some of the tests available for cystic fibrosis are newborn screening, sweat test, chest x-ray, lung function tests, and genetic testing. Cystic fibrosis can be divided into three segments, namely, cystic fibrosis mutations, curable type of cystic fibrosis, and rare type of cystic fibrosis. Some of the treatment methods for cystic fibrosis are chest physical therapy (CPT), exercise, consumption of antibiotics, lung transplant and postural drainage.

Major driving factors for the growth of the cystic fibrosis market are increasing number of patients suffering from cystic fibrosis, rising need and demand for sophisticated testing tools, and increased government funding for the development of genetic testing. Moreover, every company wants to grow and develop by using pharmacogenomic

diagnostic tools, so that they have an enviable position in the existing market. Rapid adoption of potentially advanced tests to diagnose cystic fibrosis and increasing awareness and affordability of the people across geographies will continually provide growth towards this market. On the other hand, factors like huge amount of capital involved and few adverse effects like pulmonary exacerbations and weight gain would most likely impede the growth of this market.
