## Abstracts

According to our (Global Info Research) latest study, the global Cystoscopy market size was valued at USD 277.7 million in 2023 and is forecast to a readjusted size of USD 370.7 million by 2030 with a CAGR of 4.2% during review period.

Usually, the main body of the cystoscope is an optical fiber, the diameter of the fiber is within about 9 mm, and there is a light source at the top. The cystoscope enters the bladder through the urethra, and transmits the image of the inner wall of the bladder to the eyepiece at the other end of the optical fiber. There are two types of cystoscope: soft cystoscope and hard cystoscope. Flexible cystoscope is used for both male and female patients, and generally only local anesthetics, such as lidocaine, are required for the operation. Rigid cystoscope often causes pain for patients, especially male patients. Therefore, when using a rigid cystoscope, patients often need general anesthetics to relieve pain.

Global Cystoscopy key players include Karl Storz, Olympus, Stryker, etc. Global top three manufacturers hold a share over 50%.

North America is the largest market, with a share about 35%, followed by China, and Europe, both have a share about 45 percent.

In terms of product, Rigid Cystoscope is the largest segment, with a share over 65%. And in terms of application, the largest application is Hematuria, followed by Urinary
