According to our (Global Info Research) latest study, the global Cytokine Release Assays market size was valued at US\$ 25990 million in 2024 and is forecast to a readjusted size of USD 40300 million by 2031 with a CAGR of 6.5% during review period.

Cytokine Release Assays (CRAs) are laboratory tests designed to measure and quantify the release of cytokines from immune cells in response to a stimulus. Cytokines are small proteins that play a crucial role in cell signaling, especially in the regulation of immune responses. The measurement of cytokine release is important in various fields, including immunology, pharmacology, and clinical research, to understand the immune system's response to different stimuli.

Multiplex cytokine assays enable the simultaneous measurement of multiple cytokines in a single sample. This trend involves the development of assays capable of detecting and quantifying a broader spectrum of cytokines, providing a more comprehensive profile of immune responses.
