## Abstracts

The global Cytokines market size is expected to reach \$ 930200 million by 2032, rising at a market growth of 16.0% CAGR during the forecast period (2026-2032).

Cytokines are a large group of small signaling molecules that function extensively in cellular communication. Cytokines are most often associated with various immune modulating molecules that include interleukins, chemokines, and interferons, but can also include other molecules as well. Their use in disease diagnosis and treatment has proven very beneficial over the past number of years as their use as biomarkers has been adopted as a means to understanding disease and therapies. They have expanded into more disease relevant, specialized panels for a more accurate assessment of various diseases that include cardiovascular disease, asthma, inflammation, cancer, diabetes, and rheumatoid arthritis.

Global Cytokines key players include AbbVie, Johnson & Johnson, GlaxoSmithKline, Novartis, etc. Global top four manufacturers hold a share over 50%.

North America is the largest market, with a share over 40%, followed by China, and Europe, both have a share about 40 percent.

In terms of product, TNF is the largest segment, with a share over 45%. And in terms of application, the largest application is Cancer and Malignancy, followed by Arthritis, Asthma or Airway Inflammation, etc.
