The Czochralski method is a widely utilized crystal growth technique for producing high-purity single crystals. In this process, a seed crystal is dipped into molten material and slowly withdrawn while rotating, allowing a large cylindrical crystal, known as a boule, to form. This method is pivotal in manufacturing semiconductor-grade silicon, which is essential for integrated circuits and solar cells. It is also employed in creating synthetic gemstones and optical crystals like yttrium aluminium garnet (YAG) and synthetic sapphire .?
