Abstracts

According to our (Global Info Research) latest study, the global D-Chiro-Inositol market size was valued at US\$ 36.81 million in 2025 and is forecast to a readjusted size of US\$ 78.18 million by 2032 with a CAGR of 11.3% during review period.

In 2025, global sales volume of D-chiro-inositol reached approximately 146 tons, with the mainstream ex-works price at about USD 245 per kg and the gross margin of major producers at around 35%?55%.

D-chiro-inositol, also known as DCI, is a stereospecific inositol isomer with CAS No. 643-12-9 and the molecular formula $C_6H_{12}O_6$. It is a small-molecule functional ingredient belonging to the cyclohexanehexol category. Its core value lies in its involvement in metabolic processes related to insulin signal transduction, giving it strong application relevance in nutritional support for glucose metabolism, insulin sensitivity support, and women's health nutrition management. Compared with conventional inositol, D-chiro-inositol is not simply a general nutritional supplement ingredient, but a high-value niche ingredient driven by demand from PCOS nutritional support, metabolic health management, women's health formulations, and related biochemical research.

The upstream supply chain of D-chiro-inositol mainly involves natural plant raw materials such as carob and buckwheat, precursor materials such as glucose, inositol, and D-pinitol, as well as auxiliary materials including fermentation media, enzyme preparations, solvents, adsorption resins, and purification consumables. Downstream applications are centered on nutrition and health products, mainly covering women's health, metabolic health, preconception nutrition, weight management, and compound functional formulations. As consumer and brand awareness continues to increase around PCOS nutritional support, insulin sensitivity management, and precision nutrition

intervention, D-chiro-inositol is gradually expanding from a niche biochemical ingredient to a high-value nutrition and health ingredient. Looking ahead, driven by compound formulation development, functional food upgrades, clinical nutrition research, and improved supply capabilities for high-purity raw materials, the product is expected to maintain solid growth potential, especially in the women's health and metabolic health segments.
