Abstracts

The global D-FAU(Detachable Fiber Array Unit) market size is expected to reach \$ 810 million by 2032, rising at a market growth of 9.1% CAGR during the forecast period (2026-2032).

Detachable fiber array unit is a high-precision passive optical device upgraded from traditional fiber array units. It uses a V-shaped groove substrate to arrange multiple optical fibers at micrometer intervals to achieve multi-channel optical signal coupling and transmission. At the same time, it introduces a structural separation design, allowing the fiber array and supporting substrate to be disassembled and replaced, thereby significantly improving maintainability and system upgradability. It is mainly used in optical modules, data centers, and CPOs. High density optical interconnect scenarios such as optoelectronic co packaging will have a global sales volume of approximately 10.5 million units by 2025, with an average unit price of about 42 US dollars and a capacity utilization rate of about 82%. Upstream enterprises mainly come from the fields of fiber preform rods, precision ceramics and glass substrates, optical adhesives, and micro nano processing equipment. Midstream is a manufacturer of optical communication devices and modules, while downstream is concentrated in data center operators, cloud computing manufacturers, communication equipment manufacturers, and AI computing infrastructure manufacturers. The industry gross profit margin is about 34%. The product cost structure is mainly composed of fiber optic materials and array processing accounting for about 35%, substrate and V-groove processing accounting for about 25%, precision alignment and packaging accounting for about 20%, adhesives and auxiliary materials accounting for about 10%, and labor and equipment depreciation accounting for about 10%. In terms of demand, the downstream demand list includes high-speed Optical module CPO switches, silicon optical chip packaging, AI server interconnection, and high-speed optical backboards. The

downstream customer list includes cloud service providers, telecom operators, switch equipment manufacturers, and supercomputing centers. At the business opportunity level, it benefits from policy driven infrastructure construction, data center energy-saving upgrades, and continuous investment in new information infrastructure. At the technology innovation level, it benefits from continuous breakthroughs in CPO architecture, silicon optical integration, multi-channel high-density interconnection, and low loss coupling technology. In terms of consumer demand changes, it is reflected in AI large model training and cloud computing's higher requirements for bandwidth, power consumption, and maintainability, which promote the accelerated penetration of detachable structures. The overall industry is in a rapid growth stage of upgrading from traditional optical modules to high-density optical interconnection.
