Abstracts

According to our (Global Info Research) latest study, the global D-Tagatose market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

D-Tagatose, a rare natural hexoketose, is an isomer of d-galactose. D-Tagatose occurs naturally in Sterculia setigera gum, and it is also found in small quantities in various foods such as sterilized and powdered cow's milk, hot cocoa, and a variety of cheeses, yogurts, and other dairy products. It can be synthesized from D-galactose by isomerization under alkaline conditions in the presence of calcium. D-Tagatose have numerous health benefits, including promotion of weight loss, no glycemic effect, anti-plaque, non-cariogenic, anti-halitosis, prebiotic, and anti-biofilm properties, organ transplants, enhancement of flavor, improvement of pregnancy and fetal development, treatment of obesity, and reduction in symptoms associated with type 2 diabetes, hyperglycemia, anemia, and hemophilia.

Tagatose is primarily used as a food additive and is used as the sweetener, texturizer, stabilizer, humectant, and formulation aid. Tagatose is found naturally in milk and certain fruits, however, for large scale production, tagatose is produced through the enzymatic process from lactose which is disaccharide sugar found in milk. The functional sweetener market has few buyers and sellers, thereby companies are focusing on cost optimization in order to increase productivity.
