Abstracts

The global DAC High Speed Cable market size is expected to reach \$ 2654 million by 2032, rising at a market growth of 15.3% CAGR during the forecast period (2026-2032).

A DAC high-speed cable is a type of high-speed cable designed for short-distance, high-speed data transmission. It features fixed connectors at both ends and transmits electrical signals directly through copper wires, eliminating the need for optical-electrical conversion. This cable supports data transmission rates of up to 100Gbps, offering advantages such as low latency, high reliability, ease of deployment, and significant cost-effectiveness. It is widely used in modern data centers, cloud computing, 5G communications, the Internet of Things, and other scenarios that require fast and stable data transmission. In 2025, global DAC high-speed cable sales reached approximately 11,129.8 K Units, with an average price of 82.77 US\$/Unit.

The main driver of the DAC high-speed cable market is the rapid expansion of hyperscale data centers and AI/HPC infrastructure, which is driving a surge in demand for high-bandwidth, low-latency, and cost-efficient interconnect solutions for short-reach server-to-switch connections. Compared with optical modules, DAC cables offer lower power consumption and total cost of ownership (TCO), making them the preferred solution for intra-rack and short-distance interconnects. In addition, the transition toward higher data rates (such as 400G, 800G, and beyond) and the increasing port density of switches are accelerating the upgrade cycle of DAC products, further supporting market growth.

This report studies the global DAC High Speed Cable production, demand, key manufacturers, and key regions.
