Abstracts

The global Dacromet Coating market size is expected to reach \$ 1384 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032). Dacromet coating is best understood as a branded zinc-flake (zinc-aluminum flake) coating system. It is applied through non-electrolytic processes such as dip-spin or spray followed by thermal curing, forming a thin flake-laminated barrier layer that delivers strong corrosion protection on steel fasteners and chassis components; in many regulated supply chains, chromium-free zinc-flake systems (e.g., Geomet-type solutions) have become the mainstream choice. This report provides an overview of the Dacromet coating services market.

Demand is primarily driven by downstream industries such as automotive (including EV platforms), construction machinery, and industrial equipment, where high-corrosion-resistance fasteners and chassis parts are critical to warranty risk control and assembly consistency. As supply chains increasingly require chromium-free solutions, compliant zinc-flake coating services gain share as a practical route to meet corrosion performance and sustainability expectations.

This report studies the global Dacromet Coating demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Dacromet Coating, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year.
