According to our (Global Info Research) latest study, the global Daily Regional Email Forecasts market size was valued at US\$ 850 million in 2025 and is forecast to a readjusted size of US\$ 1364 million by 2032 with a CAGR of 6.9% during review period.

Daily Regional Email Forecasts Services refer to subscription-based weather forecasting services that deliver daily regional weather outlooks, operational forecasts, risk alerts, or meteorological briefings to users by email. These services are usually customized by geographic area, marine zone, agricultural region, logistics corridor, construction site, energy asset, offshore platform, or other operating area, and may include temperature, wind, rainfall, storm risk, sea conditions, visibility, road weather, severe-weather alerts, and short- to medium-term outlooks. Compared with general weather apps, daily regional email forecast services emphasize structured, repeatable, location-specific, and decision-oriented forecasting, often supported by professional meteorologists, proprietary weather models, automated alert systems, and industry-specific interpretation.

Demand for Daily Regional Email Forecasts Services is driven by industries whose operations are directly affected by weather risk, including agriculture, marine transportation, offshore energy, road maintenance, utilities, construction, logistics, aviation support, outdoor events, insurance, and emergency management. These users need reliable daily briefings that can be directly shared with teams, clients, dispatchers, captains, field crews, or management, making email still valuable despite the growth of apps and dashboards. Business opportunities are strongest in high-value vertical scenarios such as marine routing, farm weather advisory, renewable energy forecasting, winter road operations, severe-weather risk monitoring, and site-specific

enterprise safety alerts. Providers with accurate local forecasting, clear regional segmentation, automated email delivery, expert meteorologist support, and integration with SMS, API, dashboard, or workflow systems can build recurring subscription revenue and long-term enterprise relationships.
