## Abstracts

According to our (Global Info Research) latest study, the global Dairy Cultures market size was valued at US\$ 1240 million in 2024 and is forecast to a readjusted size of USD 1866 million by 2031 with a CAGR of 6.1% during review period.

Dairy cultures are microorganisms that are intentionally added to milk in order to create a desired outcome in the final product, most often through their growth and fermentation processes.

Global dairy cultures market is highly concentrated and dominated by Chr. Hansen. The company owns more than 40% sales share worldwide.

Increasing consumer awareness about gut health and the benefits of probiotics is boosting demand for functional dairy products like yogurt, kefir, and fermented cheeses. Starter cultures enriched with probiotics or tailored for functional benefits are seeing significant growth.

Also, there is a strong trend toward starter cultures clean-label products. Dairy producers are demanding starter cultures that are free from GMOs, artificial additives, and preservatives, reflecting consumer preferences for natural and organic food products.

As plant-based dairy alternatives continue to rise in popularity, there is a significant opportunity for producers of starter cultures to develop solutions for plant-based yogurt, cheese, and other fermented products. These cultures can be adapted to work with non-dairy substrates like soy, almond, and oat milk. At the same time, with the rise of functional foods, producers have the chance to create new starter cultures that cater to

the probiotic and gut-health trends, helping dairy producers differentiate their products in a crowded market.
