The global Dairy Decanter Centrifuge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The dairy decanter centrifuge is a kind of centrifugal equipment widely used in the field of dairy production. It is mainly used for solid-liquid separation of milk. The main components include centrifugal rotor, centrifugal housing, motor, transmission system, control system, etc. Before using, it is necessary to ensure that the centrifuge rotor and the centrifuge housing are clean, injecting milk into the centrifuge rotor, and after pre-cooling and homogenization, starting the equipment for centrifugation. After the separation, the centrifuge will automatically discharge milk and whey, which has the characteristics of high separation efficiency, high product quality, stable operation, and automatic control.
