The global Dairy Pasteurization Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A dairy pasteurizer is a piece of equipment used for pasteurization (also known as pasteurization). Pasteurization is a common food processing technique that is widely used especially in the production of milk and other dairy products. This sterilization method is achieved by heating liquid food to a specific temperature, then maintaining it at a high temperature for a period of time, and finally cooling it quickly. This process effectively kills or inactivates bacteria, fungi and other microorganisms in food, thereby extending the shelf life of the product and ensuring food safety.

This report studies the global Dairy Pasteurization Machine production, demand, key manufacturers, and key regions.
